

# Enterprise Reporting Dashboard

A powerful, Enterprise Reporting Dashboard sits at the heart of iBroadcast powering vital operational intelligence which provides the current status of the key performance indicators of the system. This can be made available to key operational personnel to enable informed decisions to be made quickly and effectively.

### Features

- Access via standard web browsers (Chrome, Internet Explorer, FireFox, etc.)
- Intuitive and easy to use
- Rapidly diagnose and respond to service uptime issues

### Benefits

- Out of the box solution for a variety of report types
- Intuitive and easy to use
- Can be customised to individual customer requirements

Our experience of working with some of the largest global broadcasters has enabled us to produce an 'out of the box' set of standard reports which meet the majority of requirements. In addition, custom reports can be configured to provide the data you need at your fingertips to stay in control of your operational performance.

## The standard Enterprise Reporting Dashboard reports include:-

### Platform Performance Report

The Platform Performance report provides a real-time snapshot of the status of your platform, including the overall service uptime. Lists of specific services and their associated uptime are also provided to highlight those services that may be under-performing so you can quickly take the appropriate action to maintain a high quality service.

### Service Performance Report

The Service Performance report shows the status of each individual service being monitored by iBroadcast so that the source of any issues can be quickly diagnosed, allowing you to rectify critical issues. A drill-down capability provides access to additional data to highlight the individual devices that are underperforming.

### Device Performance Report

The Device Performance report shows the status of any individual device monitored by iBroadcast and outlines all alarms and service interruptions, along with the detail associated with each interruption. This report is especially useful for understanding what may be affecting the performance of a device.

### About iBroadcast

iBroadcast provides real-time equipment status and alarms, trending, advanced analytics, alarm correlation, automation, equipment control, advanced workflow, web-based reporting and much more. All of these features can be viewed through a single, consolidated operational dashboard, which puts you in complete control of your operation.
