Astec

iBroadcast®
Network Management System

SmartStart

Affordable enterprise empowerment
for the broadcast industry.

As a unique solution accelerator, SmartStart is a full
service package designed to get your new iBroadcast
network monitoring and control solution off the
ground quickly.

Features
- Requirements definition and capture
- System configuration
- Installation and commissioning
- Training and knowledge transfer
- Aftersales support

Benefits
- Faster solution delivery for quicker return on investment
- Exploit the knowledge and experience of
- Astec's solution delivery team
- Tailor the SmartStart package to meet your individual requirements

When customers buy an iBroadcast Network Management System they have the option to purchase complementary services such as system configuration, training, installation and after sales support as an integrated package for a fixed cost. Customers simply select the SmartStart elements that best meet their needs and Astec will deliver the package accordingly.

For broadcasters in a dynamic, fast moving environment where cost is a critical consideration, it provides a complete turnkey answer.

System Configuration

Includes initial server setup and system configuration, allowing you to focus on the expansion of the system to incorporate all of your broadcast equipment.

Engineering Services

Driver configuration and interface development for an initial base system deployment, enabling the customer or end-user to configure the remaining elements of the system and integrate the monitoring of all of future devices.

Validation and Deployment

Use Astec to validate your complete iBroadcast implementation before go-live to verify the solution and take responsibility for the successful rollout.

Training

Official iBroadcast training courses delivered as standard courses or in a 'train the trainer' format so that attendees will be capable of running additional training courses as per their own schedule and requirements. Includes hands-on experience in a live iBroadcast environment.

We believe our customers should not be locked into proprietary solutions. Instead we empower customers to take ownership of the management and configuration of their own system.

About iBroadcast

iBroadcast provides real-time equipment status and alarms, trending, advanced analytics, alarm correlation, automation, equipment control, advanced workflow, web-based reporting and much more. All of these features can be viewed through a single, consolidated operational dashboard, which puts you in complete control of your operation.
